Acceptance Test 2:

Function ID: 2			
Purpose: Admin registers employees to the website			
Setup	Steps	Expected	Actual
Admin has not create an employee account	1. Admin enters non-existing user name and non-existing password	Employee cannot log in Website/Front-end provides pop-up or message that the account does not exist.	Employee cannot log in (Functionality has not been created yet). Website does not inform user of error
Admin has created an employee account.	1. Admin enters correct to create an employee account	Employee account is created in the back-end. Front-end should give validation of account creation Employee can log in	Account cannot log in Front-end does not give validation of account creation Employee cannot log in (functionality not ready yet)
Author: Hillson			

Acceptance Test 3:

Function ID: 3			
Purpose: Test to see if can edit Name			
Setup	Steps	Expected	Actual
- Logged in as an admin - And is on an employee's dashboard	1. Admin clicks edit button on top right of the page. 2. admin clicks on the name field 3. admin alters the text 4. admin clicks save	Employee's name is changed on the webpage and in the database	
Purpose: Test to see if admin can edit employee's services			
- Logged in as an admin - And is on an Admin dashboard -Admin has Scrolled down to remove Service	1. Admin Selects employee to add service 2. Admin Selects the service to remove 3. Admin selects submit	The employee is no longer listed as providing the service The employee cannot be booked with this service The employee's current bookings remain in this service. The employee is no longer listed as a part of this service in the database.	As expected, except admin permission not yet available.
- Logged in as an admin - And is on an Admin dashboard -Admin has scrolled down to remove Service	1. Admin selects employee to add service 2. Admin selects a new service 3. Admin selects submit	The employee is added to the service in the database The service appears in the employees list of services The employee can now be booked a part of this service.	As expected, except admin permission not yet available.
Purpose: Test to see if admin can edit employee's working hours			
- Logged in as an admin - And is on an employee's dashboard	1. Admin clicks edit button on top right of the page 2. Admin selects working hours 3. Admin selects a day 4. Admin alters start time 5. Admin selects save.	The working hours start of day is changed for that day.	As expected, except admin permission not yet available.
- Logged in as an admin - And is on an employee's dashboard	1. Admin clicks edit button on top right of the page 2. Admin selects working hours 3. Admin selects a day	The working hours end of day is changed for that day.	As expected, except admin permission not yet available.

	4. Admin alters end of day time 5. Admin selects save.		
- Logged in as an admin - And is on an employee's dashboard	1. Admin clicks edit button on top right of the page 2. Admin selects working hours 3. Admin selects new hours, 4. admin enters from date 5. admin enters start time 6. admin enters end time 7. admin selects save	Working hours from the start date are changed in the database	As expected, except admin permission not yet available.
Author: Jesse & Alex			

Acceptance Test 4:

Function ID: 4			
Purpose: Test user trying to view an employee's booking history.			
Setup	Steps	Expected	Actual
User is not signed into an admin or the respective employee account.	1. User navigates to an employee's profile page.	User is denied access.	
User is signed into an admin account.	1. User navigates to an employee's profile page.	User can access the page and can see a link to view employee booking history.	
User is signed into an admin account.	1. User navigates to an employee's profile page. 2. User selects the employee history link.	User is redirected to page containing the employee's booking history. Initially the page contains bookings for the current week and the previous. There are fields to specify the range of the list.

Acceptance Test 7:

Function ID: 7			
Purpose: Test user trying to access booking availability.			
Setup	Steps	Expected	Actual
User is signed into a registered account or is not signed into any account.	1. User navigates to booking page.	Dropdown list with corresponding label 'Select Service' is display and has a value of 'Unselected'.	As expected.
User is signed into a registered account or is not signed into any account.	1. User navigates to booking page. 2. User clicks on the 'select service' button.	Dropdown list with services offered by the company are listed.	As expected.
User is signed into a registered account.	1. User navigates to booking page. 2. User selects a service. 3. User select an employee	Timeslot availabilities are displayed for the current week. At the top of the page is a booking form.	Not yet functional.
User is not signed into any account.	1. User navigates to booking page. 2. User selects a service. 3. User select an employee	Timeslot availabilities are displayed for the current week. At the top of the page there is a link to log in.	As expected, timeslots are not restricted to a week.
User is signed into a registered account.	1. User navigates to booking page. 2. User selects a service. 3. User selects next week button.	Timeslot availabilities are displayed for the next week. At the top of the page is a booking form.	Not yet functional.
User is not signed into any account.	1. User navigates to booking page. 2. User selects a service. 3. User selects next week button.	Timeslot availabilities are displayed for the next week. At the top of the page there is a link to log in.	Not yet functional.
User is signed into a registered account.	1. User navigates to booking page. 2. User selects a service. 3. User selects next week button. 4. User selects the previous week button.	Timeslot availabilities are displayed for the original week. At the top of the page is a booking form.	Not yet functional.
User is not signed into any account.	1. User navigates to booking page. 2. User selects a service. 3. User selects next week button.	Timeslot availabilities are displayed for the original week. At the top of the page there is a link to log in.	Not yet functional.

	4. User selects the previous week button.		
User is signed into a registered account.	1. User navigates to booking page. 2. User selects a service. 3. User selects next week button to reach a month in advanced.	Timeslot availabilities are displayed for the respective wee and the next week button is no longer displayed. At the top of the page is a booking form.	Not yet functional.
User is not signed into any account.	1. User navigates to booking page. 2. User selects a service. 3. User selects next week button to reach a month in advanced.	Timeslot availabilities are displayed for the respective week and the next week button is no longer displayed. At the top of the page there is a link to log in.	Not yet functional.
Purpose: Test user trying to book an appointment.			
User is signed into a registered account. Service the user wants has at least 1 available timeslot.	1. User selects a service. 2. User selects day.	Booking form updates. If applicable the time dropdown will reset to unselected if a previously selected time is not available on the new day. If applicable the preferred employee dropdown will reset to unselected if a previously selected time is not available on the new day.	Largely not yet functional; selecting a new service will unselect employee.
User is signed into a registered account. Service the user wants has at least 1 available timeslot.	1. User selects a service. 2. User selects day. 3. User selects the time dropdown list in the booking form.	Only timeslots corresponding to the availability schedule are listed. I.e. only available timeslots are listed.	Not yet functional.
User is signed into a registered account. Service the user wants has no available timeslots for the selected day.	1. User selects a service. 2. User selects day.	Time dropdown list is disabled and warning label 'No available times for this day.' is displayed.	Not yet functional.
User is signed into a registered account. Appointment with desire time/day is available.	1. User selects a service. 2. User selects day. 3. User selects time. 4. User selects the preferred employee dropdown list in the booking form.	Preferred employee dropdown list lists only employees available at the given time and day.	Largely not yet functional; employees are only shown if they provide the desired service.

User is signed into a registered account. Appointment with preferred employee is available.	<ol style="list-style-type: none"> 1. User selects a service. 2. User selects day. 3. User selects preferred employee. 4. User selects the time dropdown list in the booking form. 	Time dropdown list lists only times available on the given day with the preferred employee.	Not yet functional.
User is signed into a registered account. Appointment with preferred employee is available.	<ol style="list-style-type: none"> 1. User selects a service. 2. User selects time. 3. User selects preferred employee. 4. User selects the day dropdown list in the booking form. 	Day dropdown list lists only times available on at the given time with the preferred employee.	Not yet functional.
User is signed into a registered account. Appointment is available.	<ol style="list-style-type: none"> 1. User selects a service. 2. User selects day. 3. User selects time. 4. <i>*Optional</i> User selects the preferred employee. 5. User click book. 	The system updates: it creates the booking and stores it in the database.	As expected.
