– Definition of Done

The definition of done is defined as below:

- **Refactored**:
  - **Code** should maintain its behaviour, but *be easily understood by another* individual
- **Peer Reviewed**:
  - The task must be peer-reviewed by, or with another individual, *with appropriate peer-reviewed comments added* in the respective source code section
- **Tested:**
  - Tasks that are being *merged* (from Source to develop) should have experienced *manual exploratory* unit and module testing.
    - For instance:
      - Unit testing involves testing the individual units' functionalities and limitations (no nulls, etc). Does not violate things outside of its existing scope
      - Module testing involves its ability to *interact* with other existing modules
      - All acceptance tests are passed related the task no hand
- **Review Ready:**
  - Tasks (being completed) *should be* measured *on the burn down chart*.
    - That is – *is it part of the burn down chart?*
